2. MAINTENANCE / INSPECTION

Broken Heater or Sensor

CAUTION

Replacing the heating element is very dangerous. Be sure to turn the power switch OFF and be careful of the following procedure when replacing the heating element.

A Open the handpiece.

1. Move the tube downward. (Figure 1)
2. Remove the three screws holding the handpiece together.
3. Remove the pipe from the protruding portion of the handle.

CAUTION

Quartz glass and heat insulation are inside the pipe. Be careful not to drop or lose these items.

4. Disconnect the heater sensor connector and remove the heater.

B Measure the resistance value.

1. Measure the resistance value (a) of the sensor. The correct value is 0Ω.
2. Measure the resistance value (b) of the heater. The correct values are approximately 33Ω (±10%) (100-120V), 85Ω (±10%) (220-240V) at room temperature.
- If the resistance value is incorrect, replace the part. (Refer to the instructions included with the replacement part.)

CAUTION

Handle the heating element with care. Never rub the heating element wire!

Insert the handle's projection into the hole in the pipe.

3. TROUBLE SHOOTING GUIDE

WARNING

- Before checking the inside of the HAKKO FR-802 or replacing parts, be sure to disconnect the power plug. Failure to do so may result in electric shock.

- The unit does not operate when the power switch is turned on.

CHECK ACTION: Is the fuse blown?
Investigate why the fuse blew and then replace the fuse. If the fuse blows again, send the unit in for repair.

- **S-E** flashes, indicating a sensor error.

CHECK ACTION: Is the sensor broken?
Measure the resistance value of the sensor. The correct value is 0Ω. If the resistance value is incorrect, replace the part.

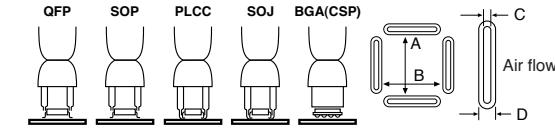

- **H-E** flashes, indicating a heater error.

CHECK ACTION: Is the heater broken?
Measure the resistance value of the heater. The correct value are approximately 33Ω (±10%) (100-120V), 85Ω (±10%) (220-240V) at room temperature. If the resistance value is incorrect, replace the part.

4. OPTIONAL NOZZLES
